SQL QUERY ASSIGNMENT

Answer the following questions (1-5) by writing SQL Query based on the following tables. Table names are addressed as **Bold Red Color**.

Name	Audrey Garcia	**Date**	10/26/26

Riverwalk Supply Co. keeps its business data in two tables. Type your answer in the answer box under each question. Each question is worth 2 points (10 points total).

Table 1: Product_Info

Product_ID	Product_Name	Category	Price	Stock_Qty
1	Wireless Mouse	Electronics	24.99	150
2	Mechanical Keyboard	Electronics	89.50	60
3	Laptop Stand	Office	34.50	120
4	Desk Organizer	Office	18.75	15
5	Standing Desk	Furniture	399.00	8
6	Office Chair	Furniture	249.00	12
7	Coffee Maker	Kitchen	79.99	40
8	Electric Kettle	Kitchen	39.99	65
9	Yoga Mat	Fitness	22.00	180
10	Monitor 27in	Electronics	329.00	20

Table Name: **Product_Info**

Table 2: Order_Info

Order_ID	Customer_Name	Product_Name	Quantity	City
101	Emma	Wireless Mouse	2	Austin
102	Liam	Standing Desk	1	Dallas
103	Olivia	Coffee Maker	1	Houston
104	Noah	Laptop Stand	4	San Antonio
105	Ava	Yoga Mat	3	Houston
106	Mason	Mechanical Keyboard	1	Austin
107	Sophia	Electric Kettle	2	Dallas
108	Lucas	Monitor 27in	1	San Antonio
109	Mia	Desk Organizer	5	Houston
110	Ethan	Wireless Mouse	3	Dallas

Table Name: **Order_Info**

Each row is one record and each column is an attribute. Product_ID and Order_ID are the primary keys.

Sample Question and Answer (not graded)

Sample Question: Show the Product_Name, Category and Stock_Qty of products in the 'Furniture' or 'Fitness' category, sorted by Stock_Qty.

Answer by writing SQL query:

```
SELECT Product_Name, Category, Stock_Qty FROM Product_Info WHERE Category = 'Furniture'
OR Category = 'Fitness' ORDER BY Stock_Qty;
```

Result (3 rows):

Product_Name	Category	Stock_Qty
Standing Desk	Furniture	8
Office Chair	Furniture	12
Yoga Mat	Fitness	180

Tips: end every query with a semicolon; put text values in straight single quotes ('Houston'); numbers have no quotes (Price > 50). AND needs both conditions true, OR needs either one, NOT gives the opposite. LIKE '%Desk%' finds a word anywhere in the text.

Questions

1. The store is creating a budget electronics list. Write a SQL query to show the Product_Name and Price of products in the 'Electronics' category that cost less than $100. **(2 Points)**

```
SELECT Product_Name, Price FROM Product_Info WHERE Category = 'Electronics' AND Price < 100;
```

2. The delivery team is visiting Austin and Dallas this week. Write a SQL query to show the Customer_Name and City of all orders placed from Austin or Dallas, sorted by Customer_Name. **(2 Points)**

```
SELECT Customer_Name, City FROM Order_Info WHERE City = 'Austin' OR City = 'Dallas' ORDER BY
Customer_Name;
```

3. Write a SQL query to show the Product_Name, Category and Price of products priced between $20 and $100 that are NOT in the 'Electronics' category. **(2 Points)**

```
SELECT Product_Name, Category, Price FROM Product_Info WHERE NOT Category = 'Electronics' AND Price
BETWEEN 20 AND 100;
```

4. A customer remembers that the product name had the word 'Desk' in it. Write a SQL query to show the Customer_Name and Product_Name of all orders where the Product_Name contains the word 'Desk'. **(2 Points)**

```
SELECT Customer_Name, Product_Name FROM Order_Info WHERE Product_Name LIKE '%Desk%';
```

5. The manager wants to know which cities placed an order with a Quantity of 3 or more. Write a SQL query to show each City only once, sorted by City. **(2 Points)**

```
SELECT DISTINCT City FROM Order_Info WHERE Quantity >= 3 ORDER BY Quantity;
```
